DETAILED ACTION

Preliminary Amendment and Request for Continued Examination

This communication is in response to Preliminary Amendment of October 15, 2003 and Request for Continued Examination of October 8, 2003.

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species A1, a preferred embodiment, Figure 2, Claims 1-4 and 15-18, drawn to a liquid crystal display wherein a plurality of color filters neighbor and overlap each other and with respect to a black matrix.

Species A2, a sub-embodiment, possibly illustrated by Figure 8, Claims 5 and 19, drawn to a liquid crystal display wherein a first color filter and a second color filter are spaced apart from the first color filter with a predetermined distance there between.

Species B, Figure 4, Claims 6-7, drawn to a method of manufacturing a liquid crystal display wherein the method may comprise patterning the color filter material by using a mask having a transparent pattern, a semi-transparent pattern, and an opaque pattern, and wherein the semi-transparent pattern is used for forming the peripheral portion of each color filter.

Species C1, another preferred embodiment, Figure 9, Claims 8-11, drawn to a liquid crystal display wherein a plurality of contact holes are formed in the plurality of color filters for exposing the drain electrodes and a plurality of pixel electrodes are connected to the drain electrodes through the contact holes and the color filters neighbor and overlap each other with respect to a black matrix.

Species C2, a sub-embodiment, possibly represented by Figure 8, Claim 12, drawn to a liquid crystal display wherein a second color filter is spaced apart from the first color filter with a predetermined distance there between.

Species D, Claims 13 and 14, drawn to a method of manufacturing a liquid crystal display wherein a plurality of contact holes are formed in the plurality of color filters for exposing the drain electrodes and a plurality of pixel electrodes are connected to the drain electrodes through the contact holes and the color filters neighbor and overlap each other with respect to a black matrix and wherein the method may comprise color filters formed through a mask differentiated in light transmission.

Application/Control Number: 09/977,684

Art Unit: 2871

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Claims 1 and 15 may be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Application/Control Number: 09/977,684
